SIGN FRAMES

A-STAKES

Custom engineered for use with our Poly Tuff outdoor board, our A-Stakes have an extra bar to prevent the sign from lifting off when it is taped/stapled at the bottom.

POLY TUFF

Poly Tuff outdoor board from Ariva is an SBS board with corona treated extruded polyethylene on both sides - making it optimal for printing on both conventional offset and UV equipment. Use Poly Tuff for applications where paper-like print quality is required, but the application is used outdoors or in high moisture areas. No need to print on both sides to produce a double-sided sign with Poly Tuff. Print on one side, score it and fold it over. The result, a double-sided sign in one pass! With the paper-based Poly Tuff you save money when compared to polystyrene and polypropylene substrates. Poly Tuff is not sealed on the edges, which means it is not 100% impervious to the elements. To maximize life-expectancy edge protection and testing is recommended.

ARIVA STOPLIGHT

Ariva Stoplight is a 100% opaque coated one- or two-sides paperboard. Available in .008, .011 and .012 calipers, Ariva Stoplight is a great alternative to blackout banner vinyl and is ideal for retail displays or any other application where side-to-side show-through needs to be controlled. Ariva Stoplight is manufactured using a proprietary process whereby curl is eliminated and stiffness is enhanced. Our customers rave about this product!
